Brake test				
Retention Arm	Tight against rope			
	Secured			
	Torsion spring free from corrosion			
The unit is functional and ready for use				

Signed _____

The repair and service guides, along with the associated checklists, are intended to assist in the accurate execution of maintenance and repair procedures. However, they are not a substitute for work performed by a trained and competent individual. All repairs and servicing must be carried out by personnel possessing the requisite qualifications and expertise. Upon completion of any repair or service, the checklist must be duly signed by the technician who performed the work. By signing the checklist, the technician affirms that the product has been serviced or repaired in accordance with the manufacturer's guidelines and has undergone appropriate testing prior to being returned to operational use.
